Education

M.Sc. Economics

University of Oregon

Eugene, OR

Expected June 2026

B.S. Economics

University of Oregon

Minors: Mathematics, Law

Eugene, OR

June 2025

Coursework & Projects

Demographic Sorting into Offshorable Occupations

2026

- Merged 3.37M person-year observations from five ACS cross-sections (2001–2019) with Autor-Dorn offshorability scores; estimated OLS sorting and log-wage regressions with state, year, and demographic-by-year interactions
- Found foreign-born workers sort into occupations with offshorability scores 0.074 points higher than comparable native-born counterparts; education gradient widened over the period as offshoring pressure intensified
- Documented a dual disadvantage for foreign-born workers: adverse sorting into exposed occupations and a steeper within-occupation wage penalty, with a 5.3% baseline wage penalty per unit of offshorability

Predicting Cognitive Occupation Placement: A Machine Learning Approach

2026

- Merged 802K ACS worker observations with O*NET skill ratings to construct an original cognitive demand index; trained and evaluated logistic regression, LASSO, and XGBoost on an 80/20 stratified holdout
- All three models converged at AUC ~ 0.857 – 0.859 ; logistic regression matching XGBoost nearly exactly, indicating cognitive occupation sorting is largely linear
- Education credential attainment dominated prediction (LASSO coefficient -1.25); racial gaps persisted after conditioning on education, industry, English proficiency, and geography

Negotiation Without Reform: Why Medicare's 2028 Part B Drug Price Negotiations Will Underdeliver

2025

- Identified a structural principal-agent problem in Medicare Part B's ASP+6% formula, under which negotiated price reductions mechanically strengthen physician incentives to substitute toward higher-cost alternatives
- Drew on empirical oncological literature to substantiate substitution risk and identify conditions under which it is most severe post-IRA negotiation expansion
- Recommended converting the percentage-based add-on to a tiered flat-rate payment by drug class and handling complexity, eliminating the substitution incentive while preserving compensation

Relevant Coursework: Econometric Theory, Micro & Macro Theory, Labor Economics, Industrial Organization, Game Theory, Machine Learning, Computational Economics, Multivariable Calculus, Linear Algebra, Proofs

Experience

Club Director

Women in Economics, University of Oregon

Eugene, OR

05/2024 – Present

- Lead a five-person executive board, delegating responsibilities across finance, outreach, and marketing while overseeing all club operations for a 30+ member organization
- Serve as primary liaison between the club and the UO Economics Department, identifying and executing department initiatives that exceed departmental capacity or network reach
- Plan and coordinate academic and professional development events including guest speakers, keynote speakers, and collaborative events across graduate, undergraduate, and faculty audiences
- Ensure full financial and operational compliance with university policy and student organization regulations

Project Management Intern

Anthem Memory Care

West Linn, OR

06/2024 – 10/2024

- Designed and administered survey instruments across all company care facilities; developed original models to quantify qualitative response data for regression analysis
- Merged survey and internal company data to conduct subset analyses; communicated findings and policy recommendations directly to relevant management and stakeholders
- Assisted CFO with compilation and analysis of Profit & Loss statements across all care communities
- Designed a cost-minimization model to optimally source and personalize necessary school supplies for employee families across all company facilities

Skills & Software

Software: R, SQL, $\text{\LaTeX}$

Econometric Methods: OLS, Fixed Effects, Panel Data, Difference-in-Differences, Regression Discontinuity, Event Studies, IV Estimation, Monte Carlo Simulation

Machine Learning: Logistic Regression, LASSO, Ridge, ElasticNet, XGBoost, Random Forests, Gradient Boosting, SVM, Cross-Validation, Reinforcement Learning
